

If Nobody Moves, Nobody gets hurt?

Introduction

- Who's here?
- Landfill operators,
- Hauling managers,
- Processors,
- Public sector,
- Private sector

Safe Attitudes

- What does it mean to be safe?
 - No accidents?
 - No reports?
 - No injuries?
 - Documented strategies?
 - Mitigated risks
- Perception vs Reality

COLLECTIVE

Average Pat

- Brushes teeth everyday 2x
- Sensible shoes
- Backs into parking spots
- Rarely speeds
- Has fire extinguishers, no escape ladder
- Doesn't eat while driving

- Let's say we are a bit better than average...

Better than Average

- Still Top 5 most dangerous industries in North America
 - Burden of injuring the public
 - Damaging private property
-
- Better than Average isn't good enough

Reduce Your Risk Everyday

- What could make you or those around you safer every day?
- Safety must be operational – everything you CAN change today to mitigate unnecessary risks, do it.
- Don't walk and text,
- Wear flat shoes and grippy shoes when walking somewhere new or on uneven ground
- Plan to check your fire extinguishers or get some for your home
- Have an emergency response plan at home
- Think about how you are getting home today...
- Have at least three things you think you could do differently...

Really?

- Systems Thinking
- Peter Senge wrote a book on the topic
- Everything that can encourage a person to think about risk mitigation or improving safety in a better light helps reduce your TRIF, and I mean EVERYTHING!
- This should be controversial because I literally mean everything and some should argue that puts takes too much responsibility away from the frontline or the supervisor depending on who you are! But I stand by my statement and know I don't do enough

MIND THE GAP

FIRST AID CASE

Medicines & Bandages

Mitigate some risks...try it, you might like it!

Mitigating Personal Risk

- Fire safety at home
- Distracted driving
- Team parents driving kids

- Any ideas that any of you have to mitigate risk personally that can translate to mitigating work related risk? Or the other way around?

Questions

- Think of a few hard questions to ask yourself or your family, they should make you feel uncomfortable?
- Try one on me now, the worst I can answer is “I am not comfortable answering that question.” But the better than average answer has to be that I encourage you to think differently about how you promote safety with everything you do.

THANK YOU
