

SWANA Northern Lights 2021 Conference - Waste Composition Profiles

Kentson Yan, Tetra Tech Canada Inc.

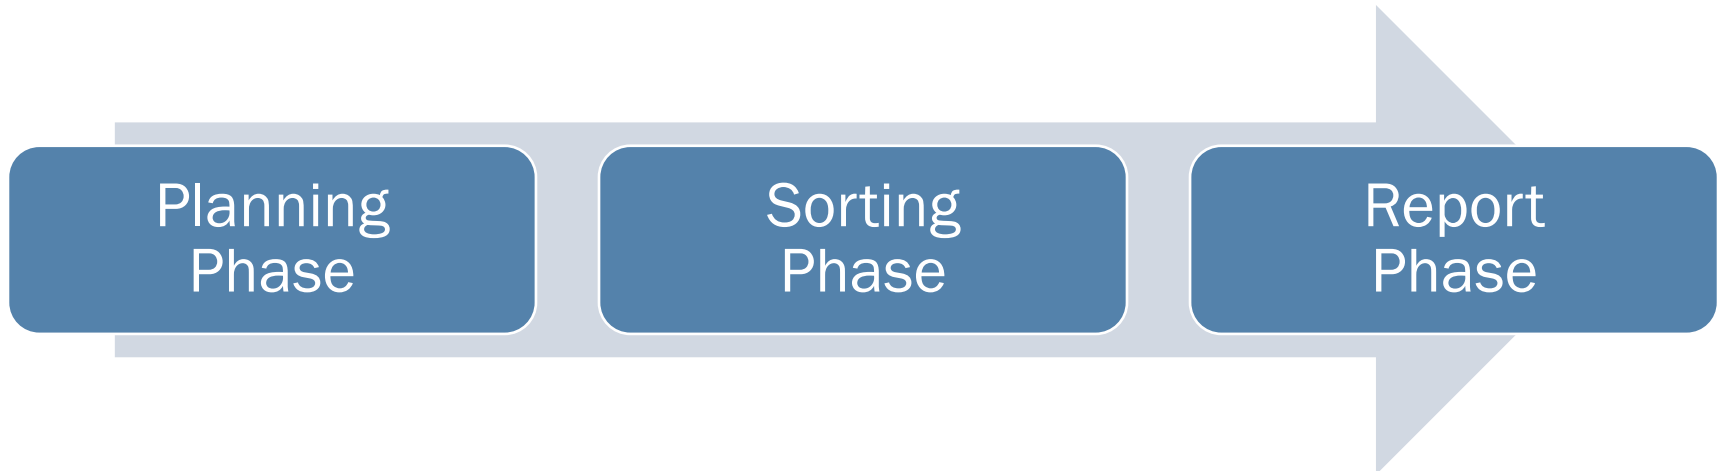

Agenda

- Overview of waste composition results
 - What is it? Intentions?
 - Benefits?
 - Approaches?
- Case Studies
 - Case 1: Town vs. City in Alberta → Community programs
 - Case 2: EPR vs. Non-EPR program → BC vs. AB Cities
 - Case 3: Change Approaches → Integrate EPR sorting
- Summary

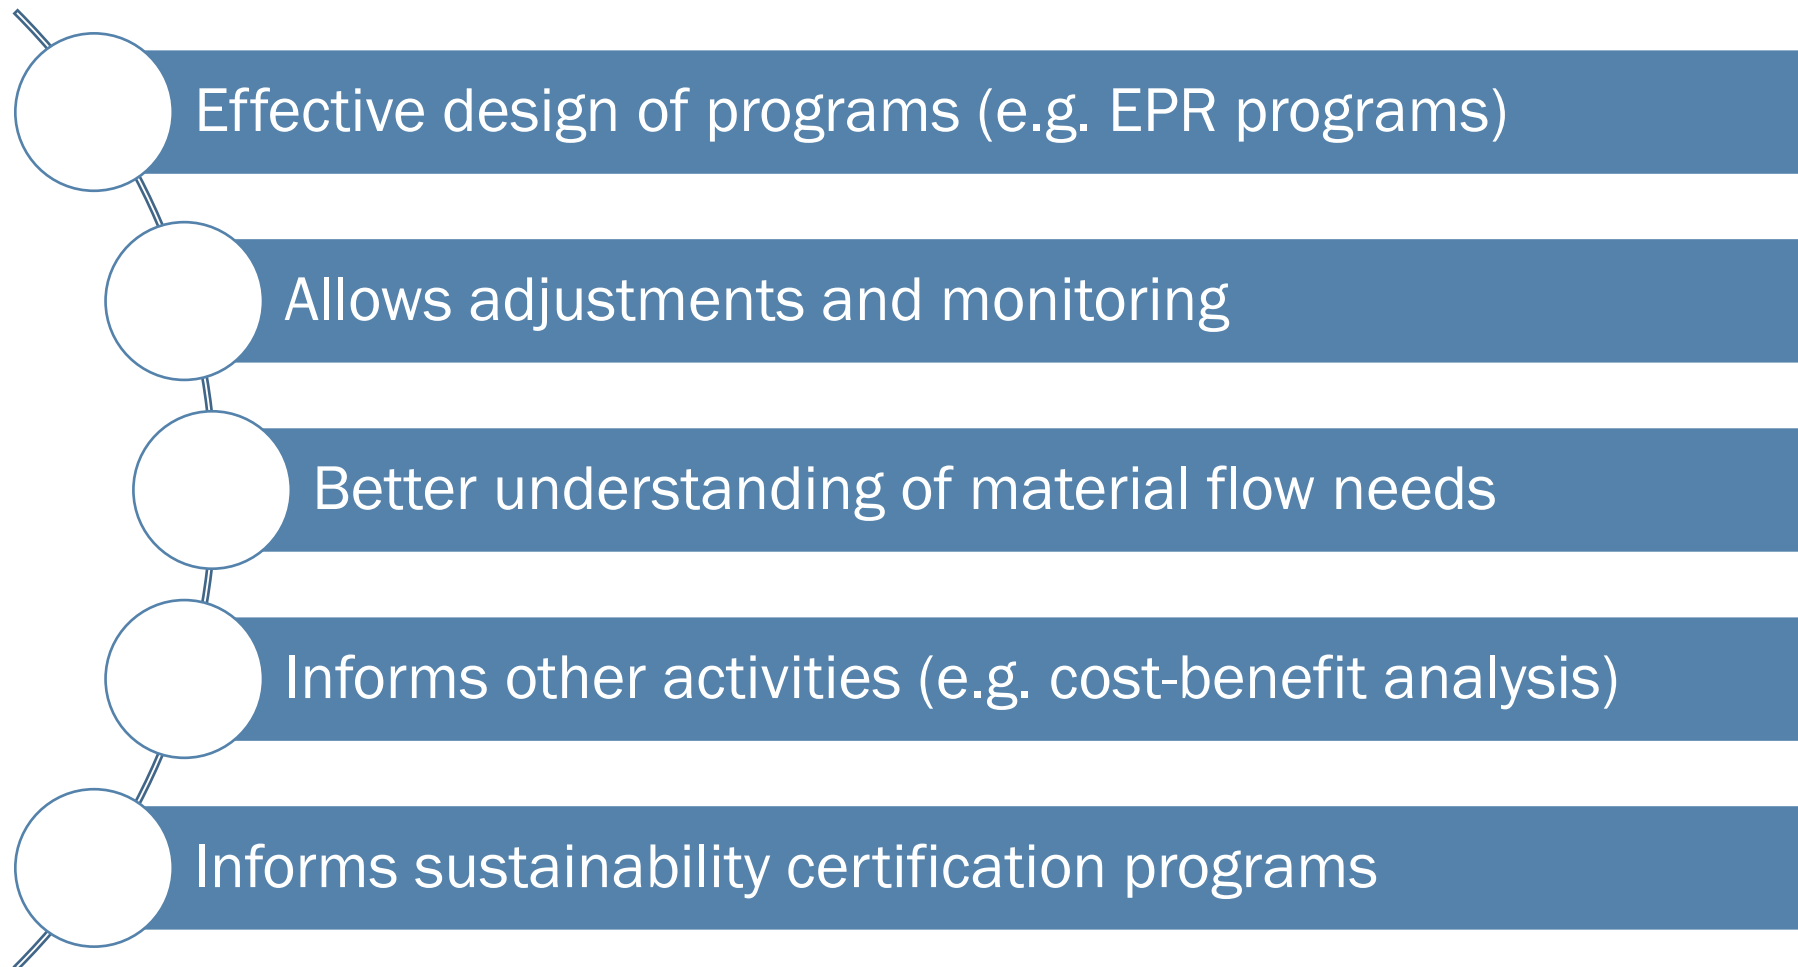

Waste Characterization Studies

General Requirements & Outcomes

- Amount, composition, & quality (nature) of all waste by:
 - Back-end (all) → off a truck
 - Functional (activity/groups) → generator (e.g. curbside)

Benefits

Approaches

- CCME (1999)
 - Waste Characterization Methods
- United Nations Industrial and United Nations Environment (1991)
 - Accounting perspective
- ASTM D 5231-92 (Reapproved 2016):
 - Standard Test Method for Determination of the Composition of Unprocessed MSW
- ★ Provincial (Alberta) Waste Characterization Framework (2005)
 - Provides statistical approach

Case Studies

Case 1: Town vs. City in Alberta

Community programs

Case 2: EPR vs. Non-EPR program

BC vs. AB Cities

Case 3: Change Approaches

Integrate EPR sorting specifics

Case 1: Town vs. City in Alberta

Town

- < 50,000 residents
- Weekly garbage and recycling collection
- No SSO

- 1 week study in the Fall
- Single family
- Curbside study

City

- 50,000+ residents
- Weekly garbage and recycling collection
- No SSO

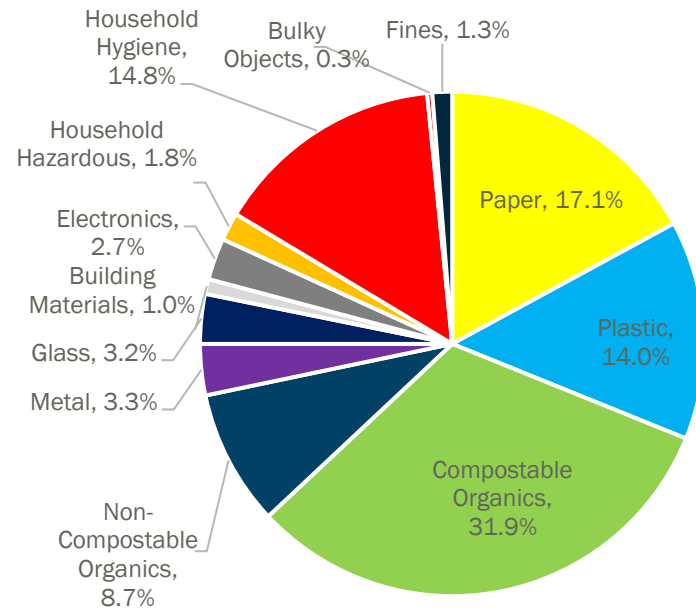

- 1 week study in the Fall
- Single family
- From trucks

Case 1: Town vs. City in Alberta

Town, AB

City, AB

Case 1: Town vs. City in Alberta

Town, AB

City, AB

Diversion potential based on “current” community programs

Case 1: Town vs. City in Alberta

Case 2: EPR vs. Non-EPR

EPR

- City in BC
- 50,000+ residents
- Weekly garbage and recycling collection
- No SSO

- 1 week study in the Fall
- Single family
- From trucks

Non-EPR

- City in AB
- 50,000+ residents
- Weekly garbage and recycling collection
- No SSO

- 1 week study in the Fall
- Single family
- From trucks

Case 2: EPR vs. Non-EPR

EPR (City, BC)

Non-EPR (City, AB)

Case 2: EPR vs. Non-EPR

EPR (City, BC)

Non-EPR (City, AB)

Diversion potential based on “current” community programs

Case 2: EPR vs. Non-EPR

Case 3: Integrating EPR sorting

In BC – secondary sort

- 2014 – 57 Categories
- 2015 – 150 Categories
- 2018 – 168 Categories
- 2020 – 171 Categories

More categories added:

- As program matured and developed
- More specific categories

EPR Sorting

Why do EPR sorting?

- Assessment of EPR programs (e.g. what is not recovered?)
- Ties well with existing (community) waste composition studies
- Solid waste management plans and diversion goals

Value-add Benefits

- Aggregated results from various waste compositions (e.g. provincially)
- Temporal vs. spatial
 - Seasonality (timing)
 - Geographical – population
- Different sectors – SF, MF, & ICI

Summary

Understand:

- quantity,
- composition, &
- quality (nature)

1. Collect

2. Sort

3. Weigh

Case studies:

1. Town vs. City in Alberta
2. EPR vs. Non-EPR program
3. Change Approaches (adding EPR sorting)

Thank you!
